

# KNOWING YOUR SAFETY SHOES

**Safety matters to us.**

Our R&D team works tirelessly to deliver shoes that blend comfort with protection. That's why our shoes comply with the **European Standard (EN 20345)** and Singapore Safety Standard (SS513)\*.

## Features

**Water Resistant**

**Anti-static**

**Shock Absorption**

**Penetration Resistant**

**Oil Resistant**

**Slip Resistant**

**Impact Resistant**

**Abrasion Resistant**

# SAFETY SHOE FEATURES

## Wide Toecap

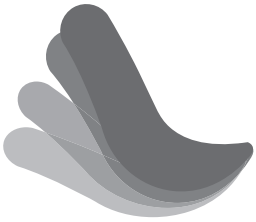

WORKSafe® safety shoes feature wider toecaps that relieve pressure on the toes, hence improving blood circulation and comfort. This is especially important for workers who stand or walk around for long hours. Wider toecaps improve toe alignment, provide greater support, enhances balance and reduces the likelihood of injuries.

Narrow toecaps can restrict blood circulation in the feet, causing sore feet and toes. Discomfort and increased pressure on the toes can increase the likelihood of injuries and other foot problems.

## Well-Cushioned Footbed

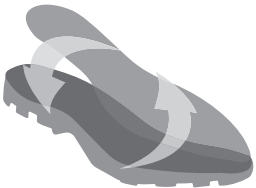

WORKSafe® footbeds match the contours of your feet. Well-cushioned and lightweight, its shaperetention properties maximizes contact with your feet. This spreads your body's weight over a greater surface area, cushioning your feet from impact and enhancing your stability.

## Dual Density PU/PU Outsole

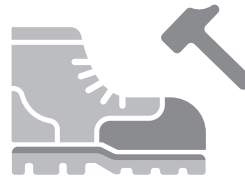

WORKSafe® safety shoes are handy and durable. The dual density polyurethane (PU) outsole offers better resistance to cracks & abrasions, compared to ordinary polyurethane outsoles. It also provides you with excellent grip on wet and oily work floors.

## Shock Absorption

WORKSafe® safety shoes feature a unique outsole thread design with a lower density insole for energy absorption when weight is applied. Its unique groove pattern helps to channel pressure away from your heel and spreads it over a larger surface area. This reduces fatigue and stress to your joints and bones.

## Steel Toecap & Insole

Tested to withstand up to 200 joules of impact, WORKSafe® safety shoes are built to give you complete protection on the work floor. In addition, its steel insole protects you from sharp nails and rocky terrains.

*\*refer to page III for details regarding these standards.*

# COMMON FOOT-RELATED HAZARDS

There are two types of work-related foot injuries. The first type involves direct damage to the feet such as punctures, lacerations and sprains. The second involves injuries caused by insufficient traction, resulting in slips, trips and falls. Identify and assess the relevant workplace hazards and choose your safety footwear wisely.

Some examples of foot hazards include:

Falling Objects

Rolling Objects

Sharp Materials

Exposure to Chemical Splashes or Spill

Wet and Slippery Surfaces

Heat and Cold

## Foot Protection and Health Tips

- Wear good quality socks that fit well to reduce friction in shoes or boots.
- Comfortable and well-fitted safety footwear can prevent many injuries. It reduces fatigue and keeps you alert longer.
- Smart workplace design choices that avoid fixed positioning and hazards improve foot safety.
- Frequent short breaks help to alleviate foot problems.
- Standing on ground that provide flexibility, such as carpet, rubber or wood, is gentler on the workers' feet.
- Safety footwear with thick, insulating soles and shock-absorbing materials can alleviate discomfort.
- Always choose shoes with a wider toecap as it reduces pressure on toes and improves blood circulation.

# MYSOLE™ WORK INSOLES

## FOOT SUPPORT

MYSOLE™ insoles are made from Polyurethane, comfortable, shock-absorbing and solid. The insoles have a strong Climatex® cover to minimise friction. Together with the Polyurethane, Climatex® offers the best solution for hot and sensitive feet.

## FEATURES

- Anatomical-shaped
- Anti-bacterial
- Anti-static
- Carbon: prevents foot odour
- Comfortable
- Shock absorbent
- Thermal control

LOW ARCH  
*flat feet*

MEDIUM ARCH  
*normal foot*

HIGH ARCH  
*cavoid or high arch foot*
