**Composed of:**

**DNV 0575**

**Jacket and Trousers weights 3,4 kg.  
Standard size L/XL**

## 024R

### COMPOSITION:

Jacket and trousers made of 550 gr/sqm aluminized rayon fiber, outside; Carbon felt lining (70% PREOXIDIZED PAN/ 30% POLYESTER) inside.

The suit has been designed in such a way as not to hamper the wearer's movements and are compatible with other P.P.E.

This clothing has been designed and manufactured to protect industrial workers from brief contacts with flame, from convective heat and from radiant heat.

It has been designed and developed in conformity with UNI EN ISO 13688:2013 and **ISO 15538:2001** standards.

The jacket consists of 5 pieces as follows:

shaped back sized 99x83 cm; front 2/4 99x47 cm; fireproof cotton lined mandarin collar 64x11 cm; 61cm-high trapezium-shaped sleeve, sleeve-join to shoulder 58 cm, wrist with elastic band sized 28 cm to prevent combustion debris to penetrate, minimum circumference 27 cm to allow the wearer to put on the suit and protective gloves in a easy way.

The trousers are made up of shaped 4/4 125cm-high and 34cm-wide with elastic band on ankles and quick coupling polypropylene braces adjustable in height. Minimum waist 120 cm (packed article). Overlapping between the two articles 50 cm; 100% twaron thread sewing 50/4 with medium stitches and fell on points that are more subject to wear, e.g. trousers crutch, sleeve circumference, collar join, the rest with linear medium stitches.

The external part can be easily cleaned from the soot settled after an intervention by means of a soft sponge or brush with soft bristles.

Labelling with pictographs, certificates and others are in accordance with the law, 15x10 cm stitched inside under the collar join at the back.

<u>Jacket</u>	M	L-XL	XXL
