BOLLÉ SAFETY CATALOGUE 1650511

# BOLLÉ SAFETY, THE LEADING BRAND

For over 60 years, we've dedicated ourselves to fashioning the ultimate in protective eyewear. Through forward thinking, superior product design and innovative technology we've created a diverse range of products that cater worldwide for all markets including manufacturing, mining, public works, construction, aeronautical, government and defence. More importantly, we've developed safety eyewear that people want to wear!

As a continuation of our innovation and the desire to develop products for the broader market, Bollé Safety has recently developed and launched two exciting new collections. Firstly Bollé Safety has launched a range of safety eyewear into the Asian market. A number of new models have been specifically designed for this key region and will provide superior fit and comfort to a wide range of face shapes and sizes. Asian fit frames available in the Australia and New Zealand markets have been highlighted accordingly within this catalogue. Our second exciting development is our Positive seal collection of spectacles. Developed specially for the mining industry and others alike that encounter dusty environments and require full positive seal protection. We see this as part of our on- going commitment to providing the right solutions to our ever growing customer base.

All Bollé Safety eyewear available in this catalogue is tested and approved to AS/NZS 1337.1:2010 for medium impact protection.

Bollé Safety – Innovative Vision.

# LENS TECHNOLOGY

## POLARISATION POLARISED

Polarised Lens: Light can bounce and reflect off a myriad of surfaces, such as water, snow and the road. Bollé Safety polarising technology removes the glare and the stress it causes to your eyes. The lenses block virtually 99.99% of UVA/UVB rays, protection that goes well beyond government and commercial standards. All Bollé Safety's polarised lenses are injection moulded. The optically precise polarising film is embedded into the lens ensuring it won't wear or scratch off the lens.

AVAILABLE IN:

- Hurricane • Prowler • Phantom • Sidewinder • Lowrider • Hustler • Voodoo • Tracker 2

NON POLARISED

POLARISED

## CONTRAST LENS CONTRAST

IMPROVED ACCURACY

Preserves colour recognition while improving your perception of depth and contrast.

HIGHER PROTECTION

Provides protection from impact and a barrier to light pollution (from sources such as neon and halogen lights).

LESS FATIGUE

Filters more than 30% of blue light which is a factor in headaches and visual fatigue (neon lights, computer screens etc...).

LESS EFFORT

Eliminates overheating of the cornea, a source of conjunctivitis, thanks to our unique UV absorbers and flash treatment.

GREATER COMFORT

May assist in reversing the aging process in the crystalline lens, a source of cataracts, thanks to its unique heat reflection treatment.

FEATURED IN:

- Axis 2

WITH A REVOLUTIONARY COATING SYSTEM, THIS GRADIENT LENS OFFERS IMPROVED LONG TERM EYE COMFORT

## EXTRA SENSORY PERCEPTION (ESP) ESP

WHY DO WE HAVE TO PROTECT OURSELVES AGAINST BLUE LIGHT?

- Blue light diffusion is 10 times more powerful than red light
- Blue light rays diffuse in all directions
- Blue light can damage the retina

LONG TERM CONSEQUENCES:

- Reduction in visual acuity
- Loss of contrast
- Discomfort, visual fatigue and headaches
- Blurred vision

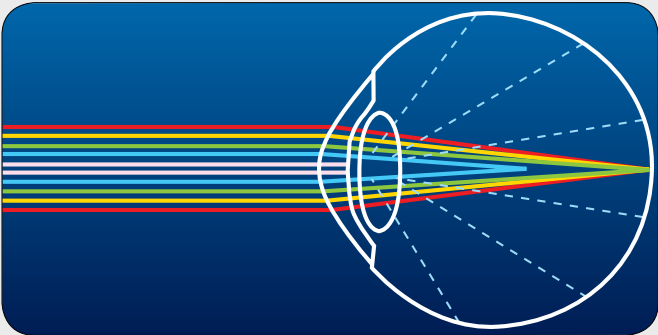

THE NEW ESP COATING FILTERS:

- 70% blue light

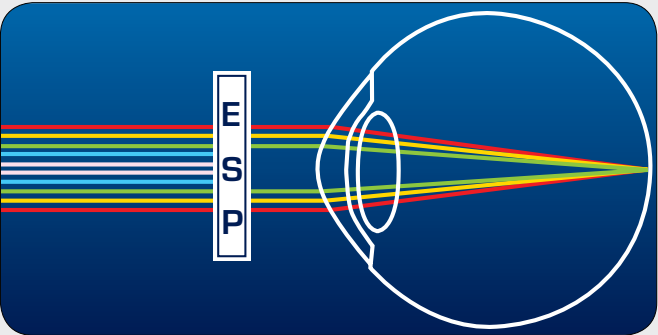

AN INNOVATIVE LENS COATING THAT REDUCES GLARE AND THE HARMFUL AFFECTS OF BLUE LIGHT TO KEEP YOUR EYES SAFE.

WITHOUT ESP

ESP

## TWILIGHT LENS TWILIGHT

Twilight Lens: Built on the successful platform of Bollé Safety's ESP coating system. Twilight technology offers the added benefit of anti-fog coating on both sides of the lens to prevent fogging in the most challenging conditions.

The high contrast, high definition and excellent light transmission is ideal for low light, outdoor work environments, particularly early morning and late evening.

Twilight filters 76% of blue light.

TWILIGHT LENS

LENS CHART

‘ALS’ - ADVANCED LENS SHIELDING

The ‘ALS’ lens coating system is a dual process offering exceptional high quality and durability. This coating technology is a combination anti-fog, anti-scratch system that provides excellent fog free capabilities along with a tough hard coat which is resistant to scratching. The ‘ALS’ coating system is applied to both sides of the following lenses: Clear, Smoke, Amber, Twilight, Bronze and Welding Shades 3 and 5 (Tracker 2).

LENS MARKINGS

Bollé Safety lens and frame marking is specific to each product. Each marking corresponds to a very specific use. Certified by independent laboratories, this information guarantees protective eyewear quality and resistance.

All AS/NZS 1337.1.2010 approved eyewear requires the relevant lens markings to show that the product is approved to standards. These markings will appear on both lenses of a dual lens product and only once on a single lens product.

O: The letter ‘O’ marking signifies that the product has been approved for the use both outdoors and indoors and the terminology used by Australian standards is ‘outdoor un-tinted’. This marking appears on all clear, amber and contrast lenses

I: The letter ‘I’ signifies ‘Medium Impact’ approval. You will see this on all Bollé Safety lines in this catalogue

C: The letter ‘C’ (goggles) signifies splash approval

3 or 5: The numbers ‘3’ or ‘5’ (welding) signifies the lens shadings, as per AS/NZS 1338

ocular Lens marking PRINTED ON LENS	range of Luminous TRANSMITTANCE
1	43-80%
2	18-43%
3	8-18%
IO/Outdoor untinted	80-100%

⊕ As per the new standard AS/NZS 1337.1.2010 all safety eyewear now requires relevant ocular reference numbers printed on all lenses.

⊕ Ocular categories for Bollé Safety’s lenses can be found in chart on previous page.

g or d: The letter ‘g’ marking signifies gas approval and the letter ‘D’ signifies dust approval

STANDARDS

All Bollé Safety eyewear presented in this catalogue is tested and approved to AS/NZS 1337.1.2010 for medium impact protection. To certify this approval all lenses are marked appropriately.

# PRODUCT TECHNOLOGY

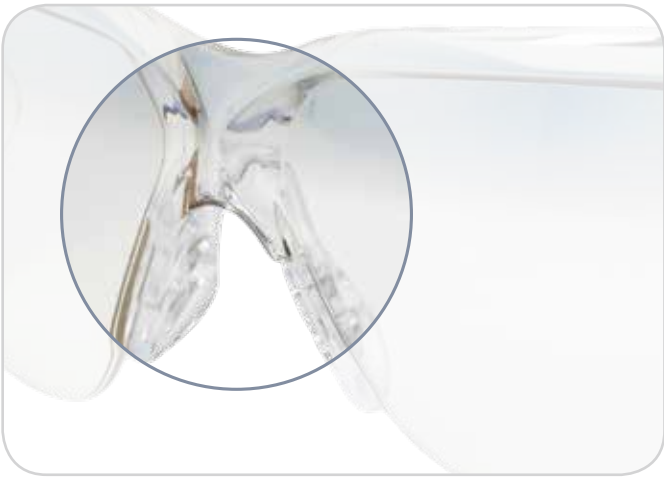

## NON-SLIP TIPGRIP:

The non-slip TIPGRIP technology ensures a better fit thanks to its dual-material design and innovative shape, improving temple comfort and hold.

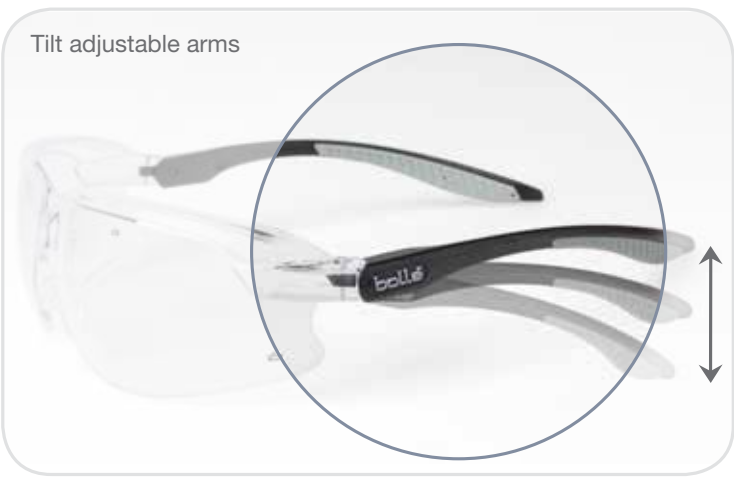

## ADJUSTABLE BRIDGE:

Designed to adapt perfectly to your nose so the frame sits perfectly on your face.

## PIVOTING TEMPLES:

This technology is used to adapt the angle of the glasses to your face shape.

## EVA POSITIVE SEAL

Bollé Safety's new positive seal collection provides a full EVA positive eye seal to maximize protection against dusty environments.

Cobra Seal

EVA Positive Seal

Positive Seal Gasket

## B-FLEX:

The revolutionary B-Flex technology provides unique flexibility. Light, soft and fully pliable, the B-Flex bridge is fully adjustable and perfectly fits all faces thanks to its shape-memory material.

## 160° FLEX:

Soft and ultra pliable, 160° flex frames can be used to adjust the space between the temples for better wearer comfort.

## EQUALIZER:

Equalizer is the high performance goggle system for protecting against fog. Thanks to its double lens and regulation patch, the equalizer filters and regulates moisture levels in the goggles.

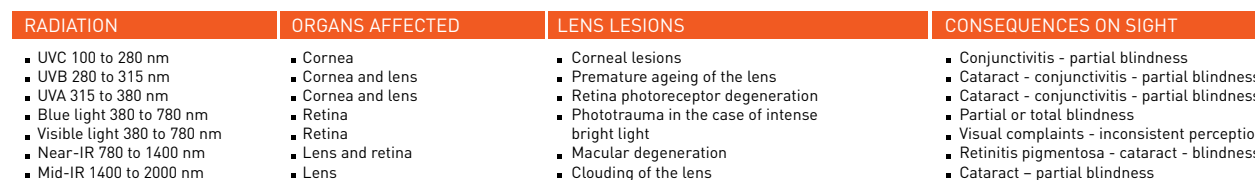

## CONSEQUENCES ON THE EYE

- **Ultraviolet Light Rays:** 5% of the sun's energy reaches the earth in this form. UV rays (invisible "tanning" rays) can cause serious damage to the unprotected eye including the development of cataracts and corneal blistering.
- **Infrared Light Rays:** 50% of the sun's energy reaches the earth as heat or infrared. Some IR rays will be absorbed

The human eye is not able to identify the various elements of a ray – it only sees the results, which are a function of the different wavelengths and their respective light intensity. The human eye can only see wavelengths within the “visible spectrum” (between 380 and 780 nanometres).
