LOCKOUT/TAGOUT SYSTEMS

The **Lockout/Tagout (LOTO)** or **"lock and tag"** is a safety procedure used to ensure that dangerous machinery is properly shut off before servicing or repairs. Essentially, the Lockout/Tagout prevents any accidental turning on of switches and valves, which could lead to fatal accidents.The device is"isolated" once locked out by the lock and tag clamps.The clamps have to be tagged so as to warn the surrounding people not to de-"isolate" the device.

Lockout/Tagout clamps with multiple padlock insertions are ideal for projects involving two or more people. Each person installs his own padlock to "isolate" the device from accidental operation. The lockout/tagout ensures that the device can be de-"isolated" only when the whole project is complete.
