SAFETY CUTTERS

Distractions and loss of concentration -

especially if you're handling blades or knives- could lead to serious injuries. Furthermore, ordinary cutters force you to adopt unnatural and straining handling postures, creating unnecessary risks.
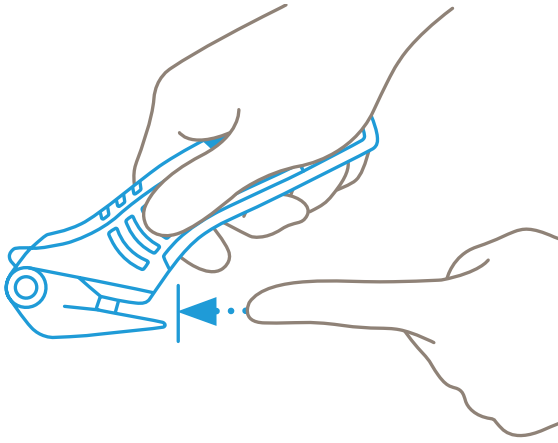

Reduce the costs of knife-related workplace accidents and injuries by investing in safety cutters! Equip your employees with tools designed for efficiency and safety for a safer and more productive workplace.

Common causes of cut injuries at work:

- Lapse in attention
- Leaving blades exposed
- Improper training
- Lack of established safety procedures
- Blunt cutters

TECHNOLOGIES OF SAFETY CUTTERS

SECUMAX
### CONCEALED BLADE= MAXIMUM SAFETY

The blade is not open, but concealed, and therefore the cutting edge is shielded from you and the packaged goods. Giving you a maximum degree of safety from cut injuries whilst cleverly protecting your goods.

SECUPRO
FULLY AUTOMATIC BLADE RETRACTION = VERY HIGH SAFETY

The intelligent cutting tool: as soon as the blade leaves the material being cut, it withdraws fully automatically into the handle. Even when you keep on pressing the slider or the lever. That's what we call "a very high degree of safety".

SECUNORM
AUTOMATIC BLADE RETRACTION = HIGH SAFETY

Thumbs up for a high degree of safety. As soon as you start cutting, remove your thumb from the slider and the blade will disappear into the handle the moment it loses contact with the material being cut.
